Seller:

1. Seller registration

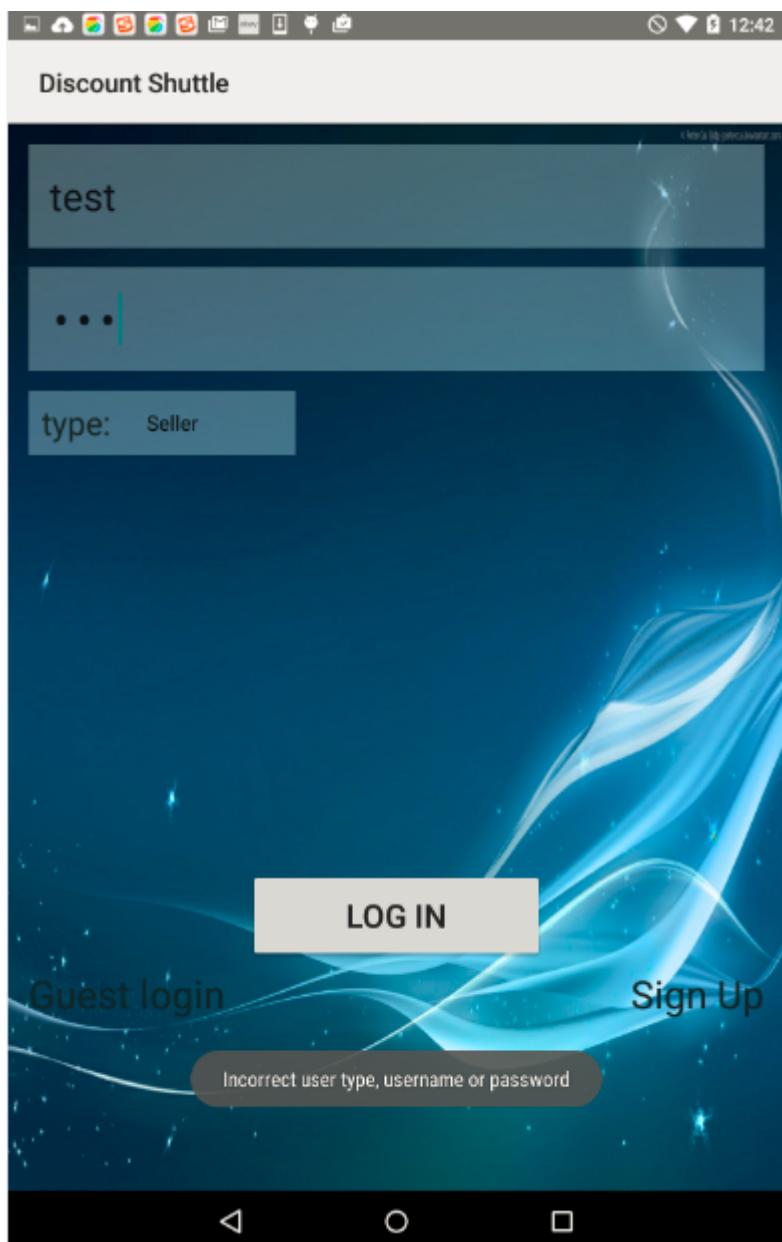

Username should be unique. If the username already exist, it will remind user to choose another one. and password should match the retype,

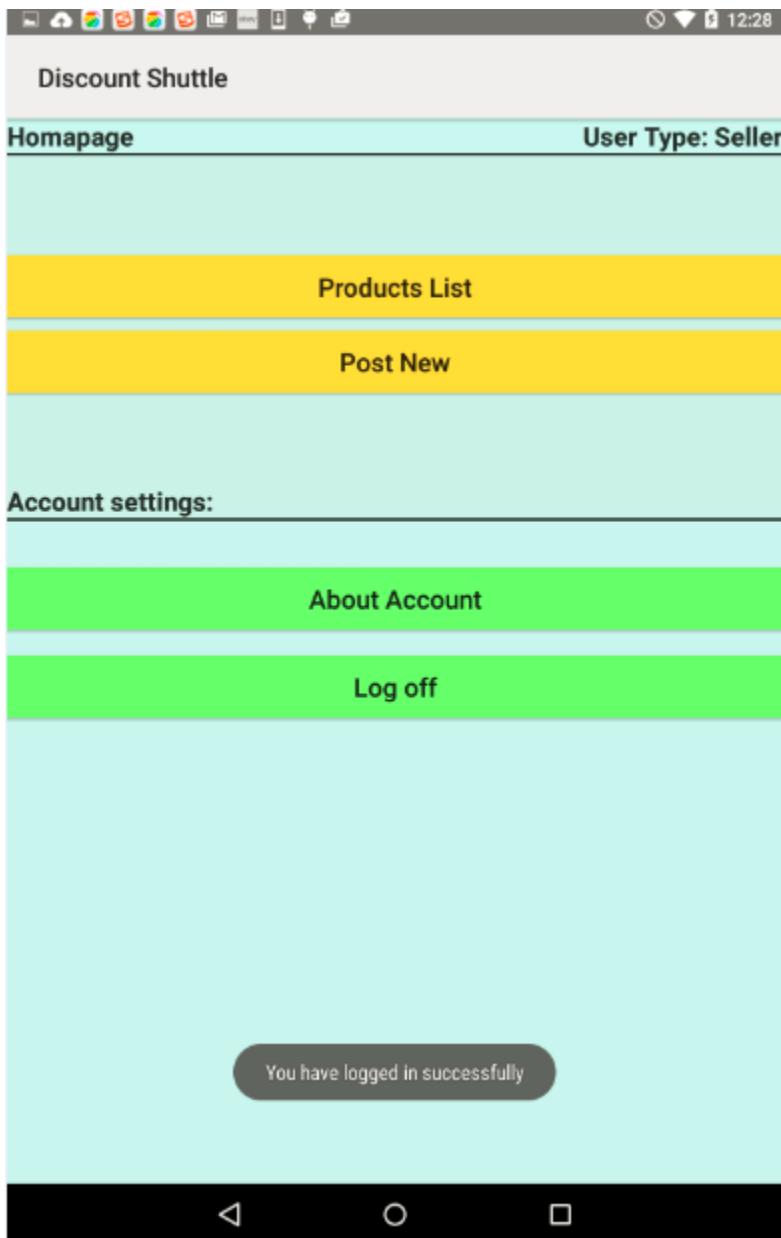

2. Seller sign in

Signing in requires username and password. If username or password is wrong, a seller can not sign in.

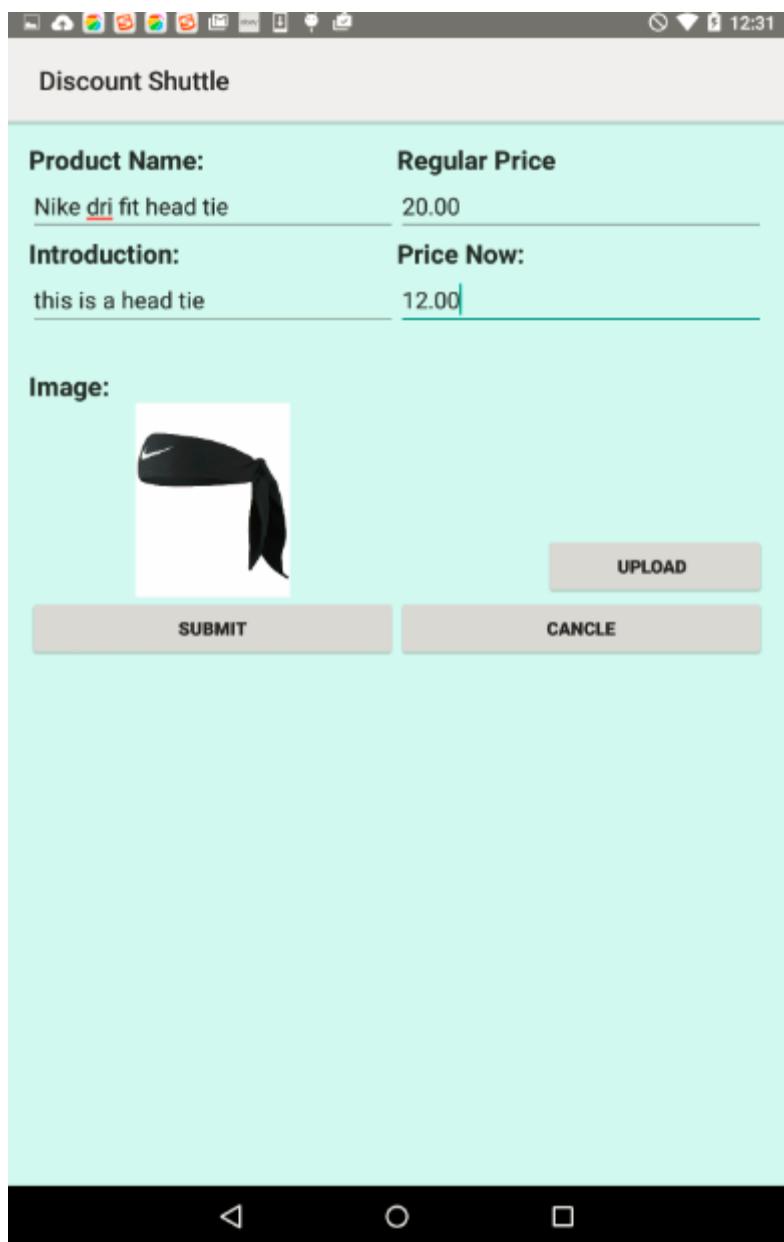

3. Seller main page

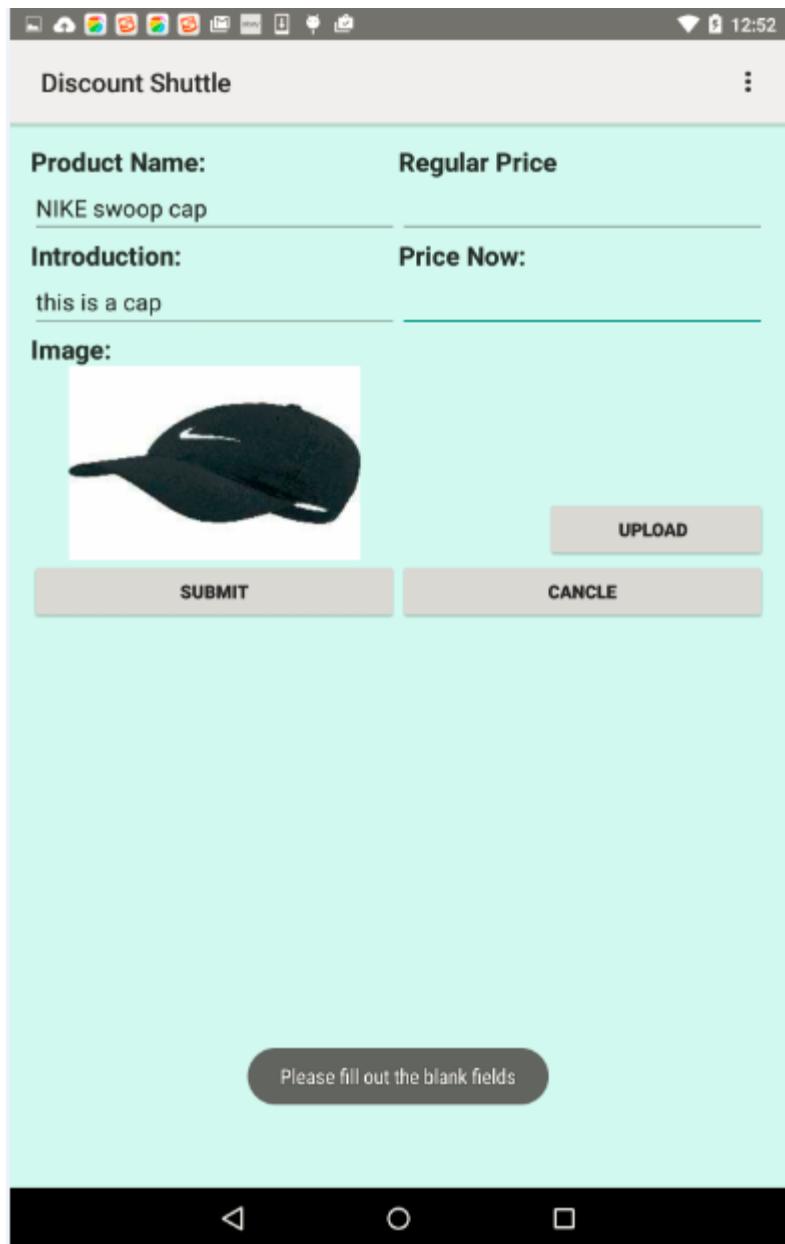

After a seller sign in successfully, it shows the seller main page. There are a few options to choose.

4. Seller post a new discount information

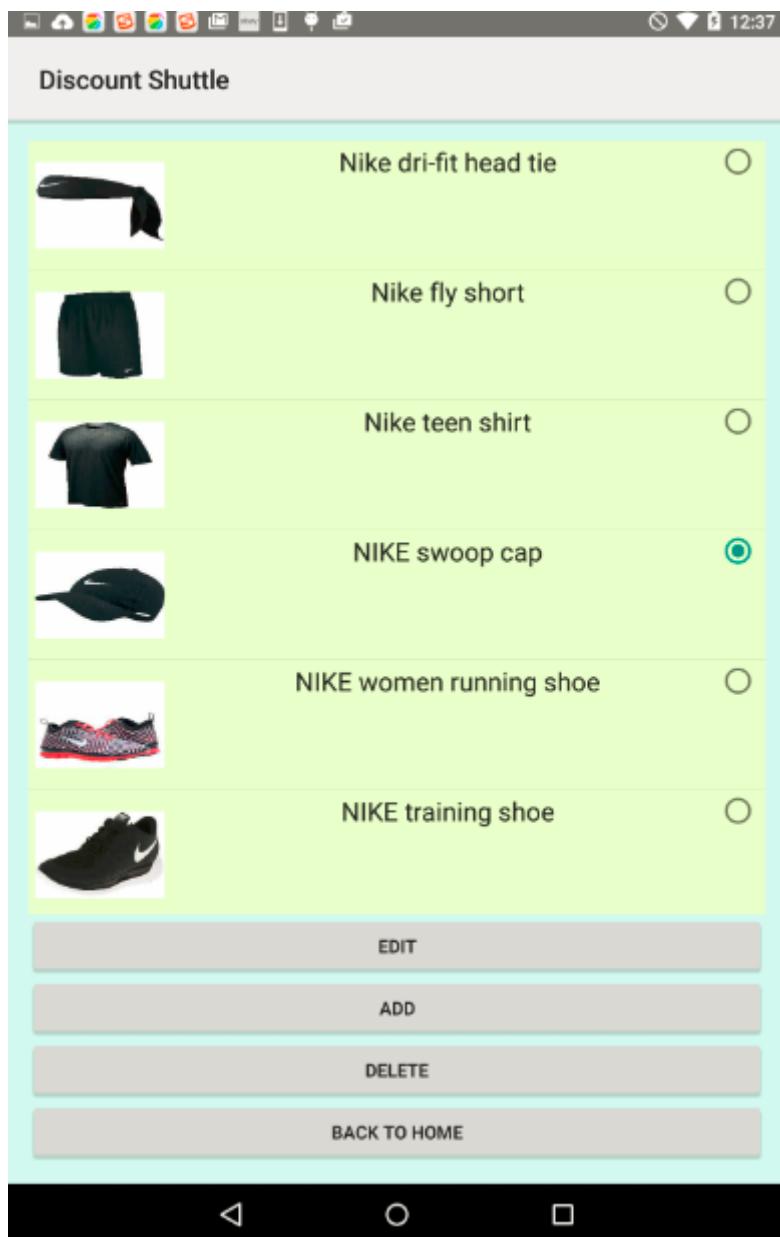

It requires the fields to be fulfilled, otherwise, it cannot be submitted.

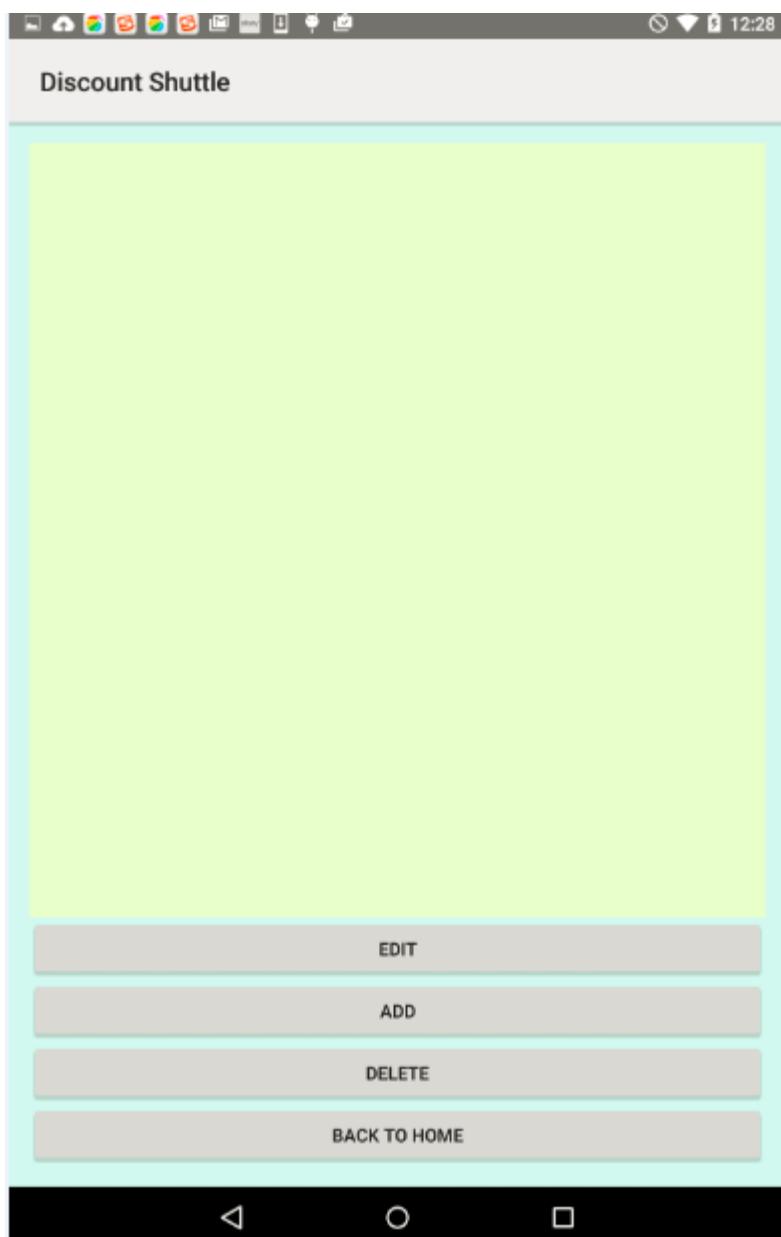

5. Seller manage the products list

After pressing products list button in the main page, a seller will see the products he has posted. A seller can choose to edit, add, delete, or back to main page.

If the seller has no products posted, it will show a blank list.

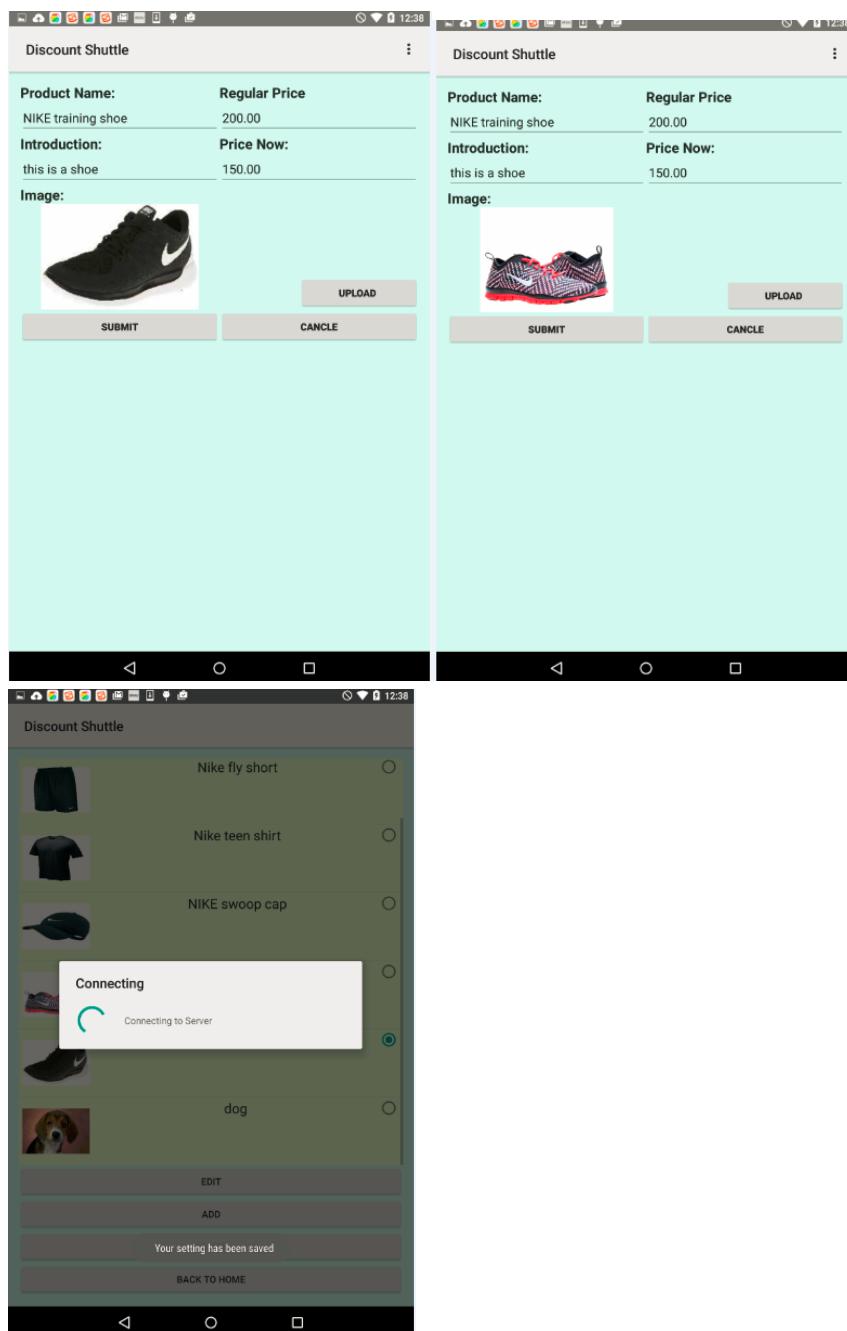

If a seller choose to add, it will be directed to post a new product page.

If a seller choose to delete, the selected item will disappear from both the list and database.

6. Seller edit a product

When seller select a product and choose to edit, it will be directed to an edit page. It shows the detailed information about the product. Seller can update the information if needed.

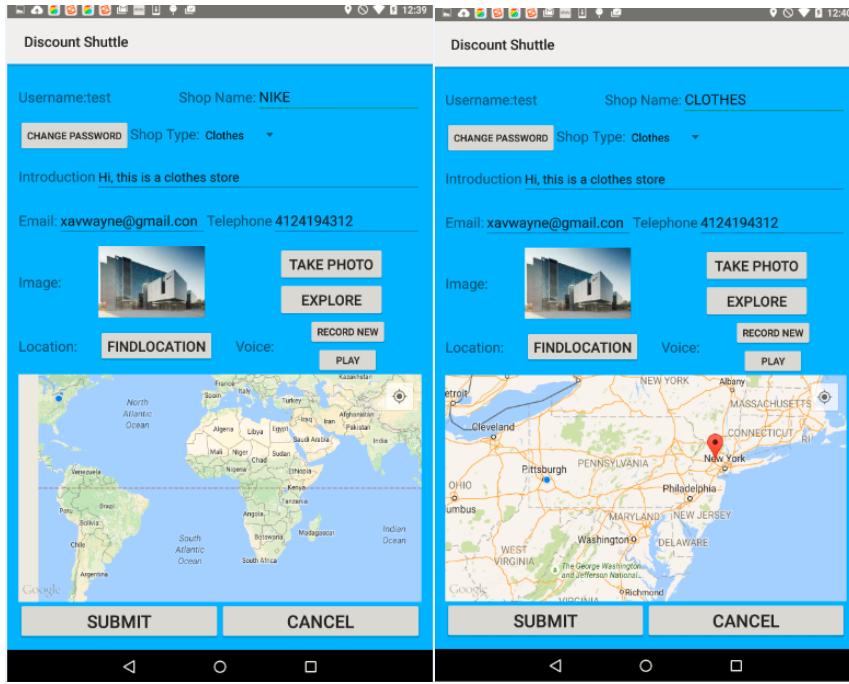

Here I update the image of the product.

7. Seller update the account information

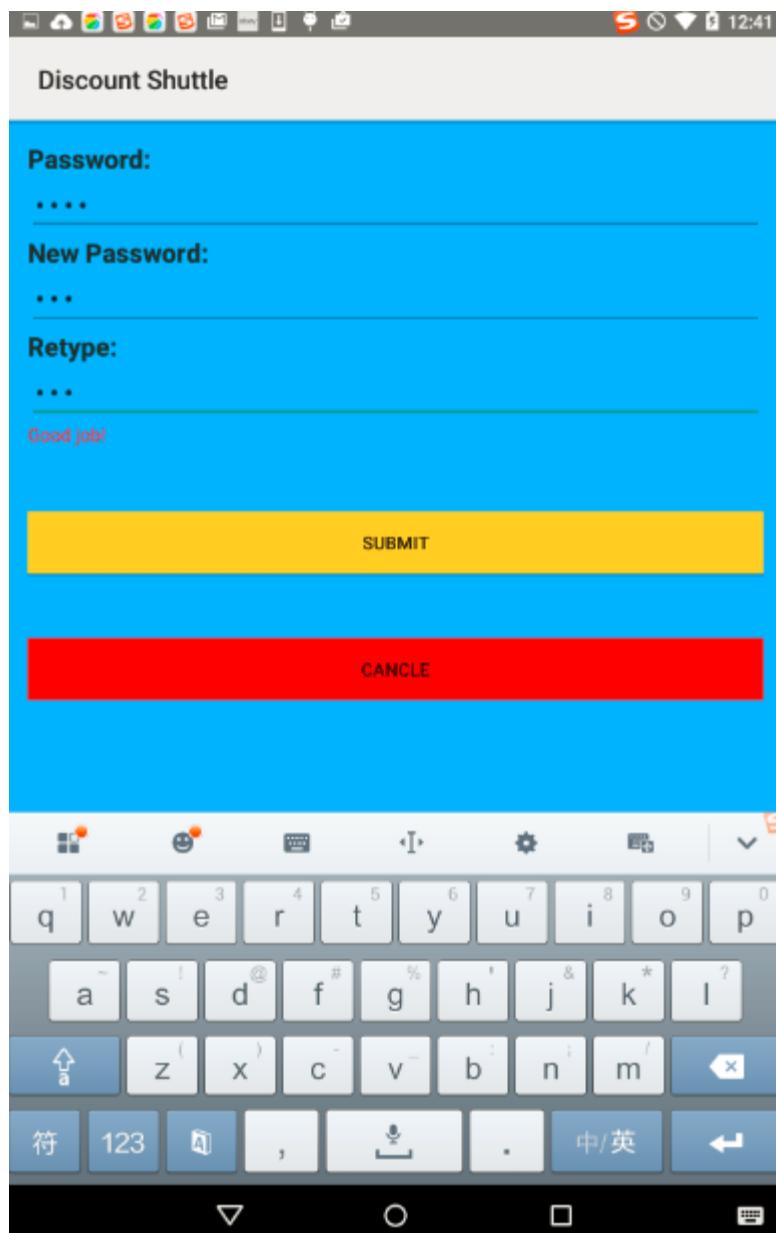

After the seller press about account button in the main page, it will be guided to the detailed account information and update the account information if needed.

Here I update the shop name and location. The location can be changed by long click on the map.

8. Seller change password

In the account information page, there is a button to change password. If pressed, the user will be directed to a new page.

If the new password typed are not same, or the old password is incorrect, it will not pass.
