Instruction to execute Discount Shuttle project

Client side:

1. Open the DiscountShuttleClient project files in android studio. Considering the IP address may vary, please change the String IP to "your IP address: port number/" in HttpDBServer in ws.local package.

2. In DiscountShuttleClient project, please edit the google map access key in google_maps_api.xml, and you should use your own google map access key to override the original one.

3. Install the project application on an android device.

Server side:

1. In java EE eclipse, please import Discount_Server as a project.

2. In ProxyDB.java file, please update the String USER and PSWD of database to your mysql database username and password.

3. Add the Discount_Server project to tomcat server.

4. Start tomcat server.

After you start the tomcat server, now you can run the application in client device and test it.
